             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score

Proc. Natl. Acad. Sci. U.S.A. 90:6150-6154(1993).

- FUNCTION: VISUAL PIGMEN'S ARE THE LIGHT-ABSORBING MOLECULES MEDIATE VISUA. THEY CONSIST OF AN APOPROTEIN, OPSIN, COVALILINKED TO CIS-RETINAL.

-- SUBCELLULAR LOCATION: Integral membrane protein.
-- SUBCELLULAR LOCATION: Integral membrane protein.
-- TISSUE SPECIFICITY: OCELLAR CELLS; MEDIAN OCELLI.
-- PIM: SOME OR ALL OF THE CARBOXYL-TERMINAL SER OR THR RESIDUI BE PHOSPHORYLATED (BY SIMILARITY).

-- MISCELLANEOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 530 |
-- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTION OF THE COMPANY OF THE COUPLED RECEPTION 
                                                                                                                                                                                                                                                                                                                                                                                     DOMAIN

Rajandream M.A.;
Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: BIDIRECTIONALLY DEGRADES SINGLE-STRANDED DNA INTO LARGE
ACID-INSOLUBLE OLIGONUCLEOTIDES, WHICH ARE THEN DEGRADED FURTHER
INTO SMALL ACID-SOLUBLE OLIGONUCLEOTIDES (BY SIMILARITY).
-I- CATALYTIC ACTIVITY: Exonucleolytic cleavage in either 5'- to 3'-
or 3'- to 5'-direction to yield 5'-phosphomonoucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-OCT-2001 (Rel. 40, Created)

                                                                                                                                                                                                                                    Nature 334:708-712(1988).

-I FUNCTION: IMPLICATED AS A CELL-SURFACE RECEPTOR ON FOR 'RESACT' A CHEMOTACTIC PEPTIDE, AND ON VARIOUS AS A RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE.

AS A RECEPTOR FOR ATRIAL NATRIURETIC PEPTIDE.

-I CATALYTIC ACTIVITY: GTP = 3',5'-cyclic GMP + diphos

-I SUBCELLULAR LOCATION: Type I membrane protein.

-I SUBCELLULAR LOCATION: 1 PROTEIN KINASE-LIKE DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CYGR_ARBPU

-i- CATALYTIC ACTIVITY: ATP + UBIQUITIN + PROTEIN LYSINE = AMP + PYROPHOSEHATE + PROTEIN N-UBIQUITYLLYSINE.
-i- PATHWAY: SECOND STEP IN UBIQUITIN CONJUGATION.
-i- MISCELLANEOUS: A CYSTEINE RESIDUE IS REQUIRED FOR UBIQUITIN-THIOLESTER FORMATION (BY SIMILARITY).
-i- SIMILARITY: BELONGS TO THE UBIQUITIN-CONJUGATING ENZYME FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the CC sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, for mynorreal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, asthma stopic dermatitis, renal disease, CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a cligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypowertabolism. They can by used for promoting syndrome, euthyroid or hypometabolism. They can by used for promoting cliniting prolactin secretion can be used for treating or preventing prolactin secretion can be used for treating or preventing plicultary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing chairing chairing or preventing chairing chairing or preventing chairing chairing or preventing chairing chairing as agents for modulating placental function can be used for treating or preventing chairing chairing as a contraceptives. The agents for modulating placental function can be used for treating or preventing chairing chairing as a contraction, unthrifty fetus, abortune, abortion, unthrifty fetus, can be used for treating or preventing contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after explision of placenta.
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the plunitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19p2 ligand.
                                                                                                                                 Disclosure; Page 26; 73pp; Japanese.

                                                                                                                      The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyssic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                               ₽
                                                                                                                                             Ş
                                                                                                                                                                                                                                                             RESULT
                                                                                                                                                                                                                                                                                   The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a creative group (II) (e.g. succinimidy) and maleimido groups) attached to comprisive group (II) (e.g. succinimidy) and maleimido groups) attached to compose the succinimidy and maleimido groups) attached to compose the succinimidy and maleimido groups) attached to compose the succinimidy and region (IV), which covalently composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth composed of an encourage of the treatment of various disorders. Endogenous therapeutic peptides are not sultable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases contracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the contractive contraction of the present invention.
                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                  This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 54 of the CC sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a central nervous system modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperripidaemia, diabetes, cancer, pancreatitis, renal disease, convertient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, caute myocardial infarction, infertility, spinocerebellar degeneration, CC constitute, trauma, atopic dematitis, osteoporosis and/or coligogalactia, Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarcan section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and plg. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; co caesarean section; artificial fertilization; galactostasis; goat; pig;

      The present sequence describes a method of controlling the secretion corticotrophin releasing hormone (CRH), involving the use of a G protrector of Igand. This can be used to control the secretion of CRH and useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           as drugs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SXC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
This sequence represents a peptide fragment from a novel human type il jand polypeptide corresponding to amino acid residues 23 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, chyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, colloqualactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cactivation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
